- Keyholding Services

ABOUT LIFELINE

Lifeline is a family based privately owned organisation specialising in the design, installation and maintenance of Electronic Fire & Security Systems.

Established in 1990, and based at Newport, on the Isle of Wight, the design team, engineers and customer support staff are renowned for their extensive depth of expertise and experience.

The company has developed and grown steadily over the years, keeping a steady pace with industry and market demands. Lifeline prides itself on a personal and individual style of service to each of the members of our highly valued prestigious client base.

Mark Lee
Commercial Director

“The provision of security & protection is one of the most important choices we can make. Whether to protect our family, our possessions, or our businesses, the choice of fire & security provider is vital to our peace of mind and re-assurance.”

You not only need to have the confidence that your choice of system is reliable, but also that the back up you receive is there when you need it most.

We take pride in using the best of technology and keep to the forefront of innovation - but above all, maintain effective relationships with all our valued clients, to ensure that the choice they make is the right one for now and the future.”

OUR SERVICES

Much of the work undertaken by Lifeline comes through word of mouth recommendation from our satisfied clients.

Operating in a geographically defined territory and surrounded by water, we find that good news travels fast and people talk about their good experiences - something we take pride in.

“Wherever you see our logo, you will know there is a professionally designed, installed and supported system.”

The Isle of Wight is a beautiful place to both live and work. Increasingly, people are choosing to relocate businesses to the Island, whilst others make it their first or second homes.

Our extensive experience and knowledge of the Island both in the commercial and domestic sectors has proved invaluable.

At Lifeline we specialise in protecting a large number of properties that might only be occupied a few weeks of the year, as a local Island based company with national standards we have built up the trust of these property owners and valued clients.

SECURITY

Alarm Systems

As you can appreciate, it is essential to limit the amount of time any would be intruder can spend in your property without being detected.

Lifeline Intruder Alarm Systems not only provide effective protection against theft, but also the consequential costs and losses such as, business down time, interruption, repair, loss of business, loss of data etc.

Each system is uniquely designed to suit your individual needs. Using a combination of GPRS, IP, PSTN services, & SMS text messaging, detection systems can immediately notify your nominated emergency contact.

CCTV

Closed Circuit Television deters crime of all types by increasing the risk of identification and prosecution.

Affordable recording devices now make it an essential tool in the fight against crime. Digital Hard Disk recording makes it easier to locate and copy incidents for evidence purposes. As you would expect, we provide the best quality cameras and lenses in line with your budgetary constraints.

Access Control

Access Control Systems ensure that only authorised persons gain access to controlled areas. Simple one door systems through to multi-door systems can be tailored to suit the individual premises to be controlled.

“Lifeline alarms have always proven to offer a professional and reliable service, advising on various options to suit budget restrictions”
Gareth Ely - General Manager, UKSA

“Unlike some, our entire team consists entirely of independently security vetted & audited personnel, over half are engineers”

FIRE

Fire Alarm Systems

The introduction of the Regulatory Reform Order 2005 transferred the responsibility of Fire Precautions from Fire Officers to landlords and owner/occupiers.

The provision of a suitable fire warning system is an essential part of meeting the obligations of the Order - whether simple warnings in a small one room property to a more complex electronic signalled system.

“BAFE and NSI certifications, together with ISO accreditation ensures you can have every confidence in us for any aspect of your alarm and security service needs”

At Lifeline, we work closely with our clients and their advisers, using our skills and experience to design and implement the correct fire alarm for the circumstances.

Fire Extinguishers

A vital component of any fire prevention scheme is the correct provision and siting of fire-fighting equipment. Our BAFE trained and certified engineers are available to advise on all matters concerning this provision.

Emergency Lighting

Safe evacuation of people from premises in the event of a complete or partial power failure leading to near blackout conditions is a requirement under legislation. The correct positioning, light levels and type of light fitting combine to ensure that the installation meets the requirements.

WHY LIFELINE?

- A family based, privately owned Island company
- Established since 1990, Lifeline is the longest continuously established provider of its kind
- The only company based on the Island with NSI and BAFE accreditation for the design, installation and maintenance of alarm and security services - and the only one to hold ISO 9001:2000 quality assurance
- Our own dedicated team based in Newport provides you with your own personal point of contact
