

## Client Testimonial

# RYDE SCHOOL

A well protected learning environment is paramount to good education. Ryde School has numerous facilities and satellite buildings on the Isle of Wight. Andrew White Assistant Bursar at Ryde School provides his comments about the services provided by Lifeline.

### The heritage of Ryde School

Ryde School is one of the most respected educational facilities in the South. 10% of 2014 school leavers are now at Oxford and Cambridge Universities. Headmaster Mark Waldron says, "Ryde School is a safe, supportive but most especially a beautiful place in which to work and grow and I am sure that is why so many of our parents are former pupils themselves. I am delighted and honoured to have the opportunity of leading this excellent School, full of warmth and opportunity and ambition for both Island children and our boarding community."

### The relationship between Lifeline and Ryde School ?

Lifeline and Ryde School have worked together for almost ten years. The

delivery of Fire & Security solutions has been extremely effective. Lifeline understand the importance of not just protecting buildings, but most importantly lives as well. Works are always planned and scheduled in advance to minimise disruption of the school schedule.

### Has Lifeline delivered professional high standards ?

Ryde School uses the Island based company Lifeline and Security Services for the installation and maintenance of its CCTV, Fire Alarm and some door

entry access control systems. They have recently helped us with the design and installation of detection and alarm systems in a new boarding House that we have established close to the School. As always they have adopted a very professional and efficient approach, ensuring that the Boarding House was fitted with the latest detection equipment and certified fit for occupation in a timely manner.

### Have you become to rely on Lifeline an effective and Business Service Provider ?

They can always be relied upon to provide us with a first class service, using state-of-the-art equipment, but also ensuring the best value for money.
